## CONSERVATION PROJEKT

Allotoca – Mesa Central

## CLUB/ORGANIZATION

Private breeder

## CAPACITY

Aquarium= 2x 112l, 1x54l, 2 smaller than 40l for the offspring.  
Tubs and pond= 10x90l, 1x150-200l, 4x500l.

## VIVARISTIC EXPERIENCE

From 2011

### geographical area, family

Carassius carassius, Tinca tinca, Leucaspisus delineatus, Gambusia hoolbroki, Umbra krameri, Misgurnus fossilis, various guppies, platies, . All originated to Oltenia region in Romania (except guppies and platies).

### breeding success

I had success with all the species above, but now I am holding just Carassius carassius.

### Motive force

I have a really huge passion in helping and breeding rare or endangered species. The rarity, the purity, the location, the differences between population, all combined make the fishes more wonderful, than buying colorful species from the trade. The achievement when you successfully help and breed a endangered fish is indescribable. It is more than a hobby, it is like a peace finder that is making you feel fulfilled and reconciled.
